

Activare autentificare SMTP Magento

Florentina Stamate - 2021-04-13 - Magento

Magento are nevoie de instalarea unui modul SMTP pentru a putea trimite emailurile cu autentificare. Va fi necesar să urmați pașii de mai jos pentru instalarea/configurarea unui modul SMTP.

Pasul 1: Descărcați și instalați în Magento [Plugin SMTP](#).

Pasul 2: Accesați **Stores >> SMTP >> Configuration**.

Pasul 3: Completați cu informațiile necesare:

- **Enable Mageplaza SMTP:** YES;
- **Log Emails:** No;
- **Host:** localhost SAU demodomain.com SAU mail.demodomain.com;
- **Port:** 25;
- **Protocol:** None;
- **Authentication:** Login;
- **Username:** example@demodomain.com;
- **Password:** parola contului de email.

Version **1.3.1**

General Configuration

Enable Mageplaza SMTP (store view) Yes

Mageplaza SMTP is compatible with default Magento SMTP and other email modules. It helps to reduce abandonment cart with One Step Checkout. Fully compatible with Abandoned Cart Email

Log Emails (store view) No

It will log all sent emails, you can preview it and schedule clean up.

Blacklist (store view)

Enter the main email pattern format. Separated by line breaks. For the email having the same pattern format with this main pattern, it can not receive email from the system.
For example: Enter the pattern: P[0-9]{1-3}[0-9]{1-3}@[a-z]{1-3}\.com means that email format must start with number, the following characters can be normal text, number or special character (\$, %, &). The domain after @ with normal-text characters will not receive email from system. For instance: lab@sample.com
For more details of writing email pattern, please see it [here](#).
