

Activare autentificare SMTP PhpBB

Florentina Stamate - 2022-01-14 - Activare autentificare SMTP scripturi PHP

Pasul 1: Din panoul de administrare, navigați la **Admin >> Email Settings >> SMTP Settings**.

The screenshot shows the phpBB Administration Control Panel. The left sidebar contains a list of settings categories: QUICK ACCESS, BOARD CONFIGURATION, and CLIENT COMMUNICATION. Under CLIENT COMMUNICATION, 'Email settings' is highlighted with a red box. The main content area shows the 'Help support phpBB' section with a 'Send statistics' button and a 'VigLink' section with an 'Enable' checkbox. A 'Submit' button is visible at the bottom of the main content area.

Pasul 2: Completați câmpurile cu informațiile necesare, după cum urmează:

- **Use SMTP server for email:** YES;
- **SMTP server address:** localhost SAU demodomain.com SAU mail.demodomain.com;
- **SMTP server port:** 25 pentru non-SSL sau 465 pentru SSL;
- **Authentication method for SMTP:** PLAIN;
- **SMTP username:** example@demodomain.com;
- **SMTP password:** parola contului de email.

SMTP settings

Use SMTP server for email:
Select "Yes" if you want or have to send email via a named server instead of the local mail function.

☒ Yes ☐ No

SMTP server address:
Do not provide a protocol (*smtp://* or *tls://*) unless your mail host tells you to do so.

mail.demodomain.com

SMTP server port:
Only change this if you know your SMTP server is on a different port.

25

Authentication method for SMTP:
Only used if a username/password is set, ask your provider if you are unsure which method to use.

PLAIN

SMTP username:
Only enter a username if your SMTP server requires it.

example@demodomain.com

SMTP password:
Only enter a password if your SMTP server requires it.
Warning: This password will be stored as plain text in the database, visible to everybody who can access your database or who can view this configuration page.

Verify SSL certificate:
Require verification of SSL certificate used by SMTP server.
Warning: Connecting peers with unverified SSL certificates may cause security implications.

☐ Yes ☒ No

Verify SMTP peer name:
Require verification of peer name for SMTP servers using SSL / TLS connections.
Warning: Connecting to unverified peers may cause security implications.

☐ Yes ☒ No

Allow self-signed SSL certificates:
Allow connections to SMTP server with self-signed SSL certificate.
Warning: Allowing self-signed SSL certificates may cause security implications.

☐ Yes ☒ No
